Requirements for Contributing a Bug Fix

- Fill out the template below. Any pull request that does not include enough information to be reviewed in a timely manner may be closed at the maintainers' discretion.
- The pull request must only fix an existing bug. To contribute other changes, you must use a different template. You can see all templates at https://github.com/atom/.github/tree/master/.github/PULL_REQUEST_TEMPLATE.
- The pull request must update the test suite to demonstrate the changed functionality. For guidance, please see https://flight-manual.atom.io/hacking-atom/sections/writing-specs/.
- After you create the pull request, all status checks must be pass before a maintainer reviews your contribution. For more details, please see https://github.com/atom/.github/tree/master/CONTRIBUTING.md#pull-requests.

Identify the Bug

Multi cursor on `Ctrl` + `Click` does not work.

fixes #20803
fixes #20911
fixes #20914
fixes #20916
fixes #20918
fixes #20925

Description of the Change

check correct setting for enabling multicursor

Alternate Designs

Possible Drawbacks

Verification Process

tests and manually verified

Release Notes

Fix multicursor support on `Ctrl` + `Click`

It would be really helpful if someone at **@atom** would comment on each PR or use one of the many ways GitHub has available for publicly tracking PRs to let people know that it is on someone's todo list and didn't just slip through the cracks as this one seems to have.

Multi cursor not working, i would rather downgrade to the previous version.
This sucks

Multiple cursor not working after last Atom update #20925   ⊘ Closed

UziTech commented 12 days ago • edited ▾   Author   Contributor

Temporary fix:

1. Open the console (`Ctrl` + `Shift` + `I` on Linux and Windows, `Alt` + `Cmd` + `I` on MacOS)
2. run `atom.config.set('core.editor.multiCursorOnClick', true);`

AlexNodex commented 12 days ago

> Temporary fix:

```
1. Open the console (Ctrl + Shift + I)

2. run `atom.config.set('core.editor.multiCursorOnClick', true);`
```

This changes the config.cson file and adds the lines required but at a different position and a different tab value....

It works nicely though while the powers that be fix it! Thanks :D

Hey **@UziTech**, thank you for the contribution and support 🙇

We are working on getting this to Atom Nightly ASAP, however the temporary workaround should work smoothly, until the fix is propagated to beta and stable.

joallard commented 2 days ago

I wasn't able to use any of the shortcuts to open the console on macOS.

However:

- Opening menu ! Ã Ṇ ꝙ Qȓ Ŏ℞ ữờ (opens config.cson)
- Indent `editor:` into `core:`
- Add `editor: \n multiCursorOnClick: true` inside `core:`

```
 1    "*":
 2      "autocomplete-plus":
 3        confirmCompletion: "tab"
 4      autosave: {}
 5      core:
 6 >      disabledPackages: [⊟
20        ]
21 >      ignoredNames: [⊟
29        ]
30        restorePreviousWindowsOnStart: "no"
31        telemetryConsent: "limited"
32        titleBar: "custom"
33        editor:
34          multiCursorOnClick: true
35      editor:
36        autoIndentOnPaste: false
37        invisibles: {}
38        softWrapAtPreferredLineLength: true
39        multiCursorOnClick: true
```

(is currently in `*.editor` instead of `*.core.editor`) will make it work on save right away.

UziTech commented 2 days ago • edited ▾   Author   Contributor

It looks like the default shortcut to open the console on MacOS is `Alt` + `Cmd` + `I`
